

ShopEZ - Comprehensive Brainstorming & Idea Prioritization

Introduction

Brainstorming played an important role in the development of ShopEZ. The process allowed the project team to discuss innovative ideas, identify customer needs, and prioritize the most important features for the platform.

Product Discovery Ideas

The team discussed implementing advanced search filters, category browsing, AI-based product recommendations, and personalized shopping experiences. These features would improve product discovery and customer satisfaction.

Security Features

Secure authentication, encrypted passwords, and protected payment gateways were identified as essential requirements. Customers need confidence that their data and transactions are safe.

Shopping Features

The project includes shopping cart functionality, wishlists, order tracking, customer reviews, and notifications. Multiple payment methods such as cards, wallets, and cash-on-delivery were also discussed.

Seller Features

Sellers require dashboards for inventory management, order tracking, analytics, and customer communication. Business reports and performance analytics help sellers improve decision-making.

Future Enhancements

Additional ideas included chatbot support, multilingual interfaces, mobile applications, voice search, and loyalty programs. These features can improve accessibility and customer engagement.

Prioritization

After discussions, the team selected authentication, product management, secure payments, and order tracking as the minimum viable product features for the initial release.
