

ShopEZ - Comprehensive Project Planning

Project Overview

Proper planning is essential for successful software development. The ShopEZ project follows a structured approach to ensure timely completion and quality delivery.

Sprint 1

Sprint 1 includes project setup, database schema creation, frontend structure, and authentication modules. The development environment is configured, and the initial system architecture is prepared.

Sprint 2

Sprint 2 focuses on product management systems including product categories, filtering, search functionality, and detailed product pages. Responsive design is implemented to support mobile and desktop users.

Sprint 3

Sprint 3 includes shopping cart development, checkout systems, payment integration, and order processing workflows. Security testing is performed to ensure transaction safety.

Sprint 4

Sprint 4 focuses on seller dashboards, notifications, order tracking, analytics reports, testing, debugging, and deployment. Performance optimization is also carried out during this phase.

Risk Management

Potential risks include server downtime, payment failures, cyber security threats, and delivery delays. Risk reduction strategies include regular backups, security updates, testing, and monitoring systems.

Conclusion

Structured planning helps ShopEZ maintain development efficiency, improve team collaboration, and deliver a reliable e-commerce platform.

Project Overview
